-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2111

1. Claims 1-24 remain for examination.
2. Applicant is requested to indicate that Figs 2 and 3 are depictions of different super instructions in the specification.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 12-24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 12, it is not clear what is a super instruction and how a super instruction is executed.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2111

6. Claim 12 is rejected under 35 U.S.C. 102(b) as being anticipated by Wolfe et al, "A variable instruction stream extension to the VLIW architecture", submitted by the applicant.

Wolfe et al teaches the invention as claimed in claim 12 including a data processing system (figs 2 and 5) for executing a super instruction according to machine cycles, said super instruction comprising a linear block of code including instruction sequences to be executed by each of a plurality of processing sections (page 8, example 1), one instruction for each machine cycle, the data processing system comprising a plurality of processing sections, each processing section comprising:

- (a) a local memory (instruction memory; lambda) for storing instruction sequences that are to be executed by that processing section,
- (b) a function unit (functional unit; DP) for executing instructions stored in said local memory according to machine cycles, each function unit executing one instruction per machine cycle, and
- (c) a pointer (sequencer; S) containing a value defining the next instruction in said local memory to be executed by said function unit.

7. Claims 1-11 are allowed over the prior art of record.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kenneth S KIM whose telephone number is (703) 305-9693. The examiner can normally be reached on M-F (8:30-17:00).
